

Artem B.

Senior Full-Stack Engineer | Node.js React Next.js NestJS

SUMMARY

Senior Full-Stack Engineer with 5+ years of commercial experience designing, developing, and scaling production web applications and backend systems. Strong expertise in TypeScript, Node.js, NestJS, React, Next.js, PostgreSQL, MongoDB, REST APIs, and GraphQL. Experienced in building scalable APIs, database architecture, authentication and authorization, real-time systems, payment integrations, and third-party integrations. Hands-on experience with AWS, GCP, Docker, Kubernetes, CI/CD, Kafka, WebSockets, and cloud-native deployments. Worked extensively with AI-powered products and LLM integrations, delivering features from system design and implementation through testing, deployment, performance optimization, and production support. Effective communicator with B2 English and experience collaborating with international product and engineering teams.

CORE COMPETENCIES:

Full-Stack Development Backend Architecture REST API Development GraphQL API Development Database Design & Optimization System Design Authentication & Authorization Real-Time Applications Microservices Architecture Third-Party Integrations Payment Systems Integration Cloud Infrastructure CI/CD & Deployment Performance Optimization AI / LLM Integrations Production Support & Troubleshooting

PROJECTS

1. Full-Stack Developer, [GlowAI](#)

GlowAI is an AI-powered no-code automation platform that enables businesses to design, deploy, and scale reliable AI workflows using human-in-the-loop execution. The platform supports 2,700+ integrations and helps organizations automate business processes through configurable AI agents and workflow orchestration.

Technology Stack

Backend: TypeScript, Node.js, NestJS, GraphQL, Prisma, PostgreSQL, Kafka

Frontend: Next.js React.js **Cloud & Infrastructure:** Kubernetes, GCP

Integrations: Stripe, Keycloak, Pipedream, Slack API, Google Chat API

Key Responsibilities & Achievements

1. Designed and implemented end-to-end AI workflow functionality, delivering new features for workflow orchestration and Agent Chat across backend services and Next.js frontend.
2. Developed and maintained scalable GraphQL APIs, business logic, and database schema migrations using NestJS, Prisma, and PostgreSQL.
3. Improved workflow execution reliability by optimizing task scheduling, recurring jobs, and trigger-based execution logic.
4. Implemented secure Stripe subscription management, including billing workflows, webhook processing, and payment lifecycle integration.
5. Built and maintained third-party integrations with Slack, Google Chat, and external automation services through Pipedream.
6. Collaborated on cloud infrastructure running on Kubernetes and GCP,

SKILLS

Programming Languages

JavaScript, TypeScript

Front-end:

React.js, Next.js, Redux, Redux Toolkit, Zustand, TanStack Query, Vite, HTML5, CSS3, SCSS, Sass, Less, Tailwind CSS, Material UI, Ant Design, Shadcn UI, Radix UI, styled-components

Back-end:

Node.js, NestJS, Express.js, REST API, GraphQL, JWT Authentication, WebSockets, [Socket.io](#)

Databases & Data Storage:

PostgreSQL, MongoDB, MySQL, Firebase, Supabase

Cloud & DevOps:

AWS (EC2, S3, RDS, Lambda), Docker, CI/CD, GitHub Actions, Vercel

UI & Data Visualization:

Chart.js, ApexCharts, Highcharts

Testing & Quality Assurance:

Jest, Mocha

AI-Assisted Development:

Claude Code, GitHub Copilot, Prompt Engineering, AI-Assisted Software Development, AI-Augmented

Engineering Workflows

Tools & Platforms:
GitHub, GitLab, Bitbucket,
Jira, Trello, Webpack, npm,
Zendesk, Webflow.

EDUCATION

Bachelor’s Degree of Computer
Science
NTU “KHPI”

Master ’s Degree of Computer
Science

Upper-Intermediate B2
 - Written:
Upper-Intermediate B2

- resolving cross-service production issues and supporting stable application deployments.
- Contributed to platform scalability by maintaining distributed services, troubleshooting production incidents, and delivering production hotfixes.
 - Supported the platform rebranding from **Doflo** to **GlowAI**, ensuring seamless migration and uninterrupted production operations.

2. Back-End Developer, [MovesMethod](#)
[Movesmethod](#)

MovesMethod is a fitness platform that helps users build healthy daily movement habits through personalized workout plans, activity tracking, body analysis, and scheduled notifications.

Technology Stack

Backend: TypeScript, NestJS, PostgreSQL, Supabase, Supabase RPC Functions, Supabase Edge

Functions, Row Level Security (RLS)

Tools & Integrations: APNs, SendGrid, Mixpanel, Swagger

Frontend (Admin Panel): Vite, Tailwind CSS, shadcn/ui, Zod, Sonner

Infrastructure: Render

Key Responsibilities & Achievements

- Designed and optimized PostgreSQL database architecture, improving schema maintainability and synchronizing production and development environments.
- Implemented secure data access using Supabase Row Level Security (RLS), custom RPC functions, and Edge Functions.
- Developed RESTful APIs with comprehensive Swagger documentation for mobile application services.
- Built a web-based administration panel for managing application content and operational workflows.
- Integrated Apple Push Notification service (APNs) to deliver automated and scheduled user notifications.
- Developed internal developer tools, including a custom Supabase testing module and schema synchronization utility for environment consistency.
- Improved backend reliability and maintainability through database optimization, reusable backend components, and automated development workflows.

3. Full Stack Developer for AI-powered educational platform, [Pascal Academy](#)

Pascal's Academy is an AI-powered EdTech SaaS platform that delivers personalized learning experiences through AI tutors, real-time collaboration, subscription management, and advanced learning analytics. The platform provides students, parents, and educators with role-based dashboards, AI-assisted tutoring, secure authentication, and scalable cloud infrastructure, making high-quality education more accessible and interactive.

Technologies:

NextJS, Redux Toolkit, Tanstack Query, TailwindCSS, NextAuth, SocketIO, Stripe (checkout, subscription, top-ups), i18n, Zod validation, Recharts, Docker, CI/CD

Node.js, NestJS, TypeScript, PostgreSQL, Prisma, Redis, Docker, CI/CD, Auth

(JWT/OAuth), Stripe, WebSockets, LLM APIs (OpenAI, Gemini, Grok), Google APIs, Jest for testing, Railway for infrastructure deployment, Brevo, Sentry, Prometheus, Grafana

Key Responsibilities & Achievements

1. Developed end-to-end product features across the Next.js frontend and NestJS backend, delivering role-based dashboards for students and parents with progress tracking, learning analytics, recommendations, and activity monitoring.
2. Designed and implemented secure authentication and authorization flows using JWT, OAuth, NextAuth, and custom email verification mechanisms.
3. Integrated Stripe subscription management, including Checkout, Customer Portal, subscription lifecycle (upgrades, downgrades, cancellations), top-ups, and webhook processing.
4. Built real-time communication features using Socket.IO, enabling live chat, notifications, and event-driven updates across the platform.
5. Integrated multiple LLM providers (OpenAI, Gemini, DeepSeek, and Grok) to power AI tutoring, contextual conversations, prompt orchestration, and personalized learning experiences.
6. Optimized backend performance using Redis caching, database query optimization, and efficient data access patterns to improve application responsiveness.
7. Implemented monitoring and observability using Sentry, Prometheus, and Grafana to improve production stability and simplify issue detection.
8. Contributed to CI/CD pipelines, Docker-based deployments, automated testing with Jest, and cloud infrastructure running on Railway.

4. Back-End Developer for AI-powered B2B SaaS

[Autofunnel](#)

Autofunnel is an AI-powered B2B marketing automation platform that enables businesses to build landing pages, sales funnels, email campaigns, digital products, and AI-generated marketing content without coding.

Technology Stack

Backend: Node.js, NestJS, GraphQL, MongoDB, Mongoose, WebSockets | **Cloud & Infrastructure:** AWS (EC2, S3, SQS, Cognito, DocumentDB, CloudWatch) | **Integrations:** Stripe, Mailgun, OpenAI | **Testing & DevOps:** CI/CD

Key Responsibilities & Achievements

1. Developed backend features using NestJS, GraphQL, and MongoDB for the platform's core marketing automation services.
2. Designed and implemented an internal wallet and credit management system to support AI-powered feature usage and billing.
3. Integrated Stripe payment processing, including payment workflows and secure transaction handling.
4. Built and enhanced email generation and bulk email delivery functionality using Mailgun.
5. Contributed to CI/CD pipeline configuration, automated testing, and deployment processes to improve release reliability.
6. Optimized backend services by improving search functionality, CSV data processing, and overall application performance.

7. Maintained and enhanced multiple platform modules by resolving production issues, improving system stability, and supporting ongoing feature development.

5. Full-stack Developer for B2C AI-powered SaaS

[Wonderish](#)

Wonderish is an AI-powered no-code website builder that enables users to generate websites, landing pages, and web applications using natural language. The platform automates project generation, deployment, hosting, and management through AI-powered workflows and cloud infrastructure.

Technology Stack:

Frontend: Next.js, React, Tailwind CSS | **Backend:** Node.js, NestJS, PostgreSQL, Supabase, WebSockets, OpenAI | **Cloud & Infrastructure:** Kubernetes, Render, Cloudflare (KV, R2, Custom Domains) | **Integrations:** Stripe | **Testing & DevOps:** CI/CD

Key Responsibilities & Achievements:

1. Designed and implemented the backend architecture, database schema, and REST APIs powering AI-driven website generation and project management.
2. Developed end-to-end Full-Stack features using Next.js, React, NestJS, and PostgreSQL for website creation and administration workflows.
3. Built Kubernetes-based deployment infrastructure, including automated pod provisioning, cleanup, restoration, snapshot creation, project cloning, and rollback mechanisms.
4. Implemented Stripe payment integration, sandbox environments, and subscription-related functionality.
5. Configured Supabase, Render, and CI/CD pipelines to automate application deployment and testing.
6. Developed internal administration tools and dashboards for platform management and operational analytics.
7. Created developer utilities for accessing project file structures and runtime environments within Kubernetes pods.
8. Implemented automated API and service testing, improving platform reliability and deployment quality.

6. Full-Stack Developer for LegalTech SaaS platform, [Timely Wills](#)

Timely Wills is a LegalTech SaaS platform that simplifies the creation and management of wills, powers of attorney, and other legal documents. The platform provides secure document management, online payments, PDF generation, and guided workflows to make estate planning simple and accessible.

Technology Stack:

Frontend: Next.js, TypeScript, Zustand, Axios, Tailwind CSS, shadcn/ui, Radix UI, React Hook Form, Zod, Stripe, Intercom | **Backend:** Node.js, NestJS, Strapi CMS, PostgreSQL, TypeORM, Stripe, AWS (EC2, S3), SendGrid, PDF Generator API | **Libraries & Tools:** Day.js, libphonenumber-js, react-doc-viewer

Key Responsibilities & Achievements:

1. Developed a full-stack LegalTech platform from scratch using Next.js, NestJS, PostgreSQL, and Strapi CMS.
2. Built responsive, mobile-first user interfaces with complex forms, validation, protected routes, and secure JWT-based authentication.
3. Implemented end-to-end document management workflows, including PDF generation, preview, upload, storage, and access control.
4. Integrated Stripe payment processing with subscription management, promo codes, and secure checkout flows.
5. Developed backend services for account management, email notifications, password recovery, and dynamic document generation.
6. Integrated AWS S3 for secure file storage and SendGrid for transactional email delivery.
7. Embedded Intercom to provide customer support and improve user engagement.
8. Delivered scalable, production-ready features across the entire application lifecycle, ensuring a secure and reliable user experience.
